# RadListView

- Virtualizing list component that provides the most popular features associated with scenarios where a list of items is used
  - item animations
  - different layouts and orientations
  - smart defaults for many gestures - select on long press, execution of special action on swipe, reorder of items on long press and drag, refreshing the list on swipe or loading more items only when needed
- Supports three layout strategies: List, Grid, Staggered Grid

# RadListView

- RadListView supports the following advanced features on lists:
  - Pull to refresh
  - Load on demand
  - Swipe to execute
  - Header and footer
  - Item reorder
  - Item selection
